1. New Features in Minitab Engage 6.7

Send process maps to Simul8

Quickly send process maps from Engage to Simul8 to save time, reduce errors, and make it easier to test and understand how process changes can improve performance before you implement them.

Archive templates

Data architects can now archive inactive or outdated templates to streamline template management and ensure that users can only access approved templates and methodologies when creating new projects and tools.

2. Problems Resolved in Minitab Engage 6.7

The following issues are resolved in Minitab Engage 6.7.

- After changing the name of a shape on a map, the new name is not maintained in forms that share the shape data. (284975)
- When opening the desktop application, it crashes. (288677)

3. Known Problems and Workarounds

Item 1

In some cases, using many images in a Rich Text Box may impact application stability. (182323)

WORKAROUND: Distributing images across multiple boxes may help mitigate potential issues.

Item 2

Certain regional settings may affect date selection within the calendar picker. (182136)

WORKAROUND: Manually enter the date to ensure accuracy.

Item 3

Copying form elements while using Remote Desktop may occasionally cause unexpected behavior. (178344)

Item 4

Adding rows in specific areas of a form layout may result in unexpected outcomes. (182384)

Item 5

In some cases, text may be difficult to see when certain fill colors and font settings are applied. (183145)
