| 4. New Features in Minitab Dashboards | 2 |
| 5. New Feature in Minitab Brainstorm and Minitab Workspace..... | 2 |

1. New Features in Minitab Solution Center

Minitab Simul8® is now available from the Minitab Solution Center

Minitab Simul8® is now available through the Minitab Solution Center for Simul8 License Portal subscriptions, enabling teams to use process simulation to evaluate changes and understand system impact before implementation.

Improved protection for unsaved work

Minitab Solution Center now includes additional protections to reduce the risk of losing unsaved work. New repository connection and recovery capabilities help users connect to autosave-enabled repositories and recover recent unsaved work when available.

2. New Features in Minitab Statistical Software

Data Pane Improvements

The data pane in the web app has been enhanced with improved performance, clearer visual indicators for active cells and selections, and support for multi-cell selection. Data entry and navigation are now more responsive and reliable, and worksheet data is displayed more consistently when opening files.

Consistent Data Connections Panel in Minitab Statistical Software & Dashboards

Manage project data connections more easily with the new Data Connections panel in the Minitab Solution Center. View connection details and quickly refresh, add, rename, edit, or delete connections across Minitab Statistical Software and Minitab Dashboards.

Enhancements to Statistical Output

The test tables for 1-sample t tests and paired t tests now display degrees of freedom. The orthogonal regression output tables have also been revised to more closely match the format and structure of other linear model outputs.

3. Problems Resolved in Minitab Statistical Software

- An incorrect rank deficiency error is given in Fit Regression Model. (243625)
- Post-analysis features are disabled when the browser is set to a narrow width. (362112)

4. New Features in Minitab Dashboards

Cross Filtering Bar Chart, Pareto Chart, and Pie Chart

This feature introduces the ability to interact directly with charts to filter data. By allowing a user to click data in one chart (for example, a bar, point, or region), the rest of the visuals on the dashboard will automatically update to show only the related subset of data.

Create Dashboards with Simulation Data

Minitab Simul8® users can now import simulation data directly into Minitab Dashboards to create interactive visualizations, track key metrics, and share insights with stakeholders.

5. New Feature in Minitab Brainstorm and Minitab Workspace

Create brainstorm diagrams from images and text using Brainstorm AI

Start a new brainstorm diagram from an image, a text description, or both using Brainstorm AI. Upload images of paper sketches, whiteboard photos, flipchart notes, meeting notes, defect descriptions, or screenshots to generate a brainstorm diagram that you can edit, reorganize, share, and refine.

Brainstorm landing page updates

Get started faster with an improved Brainstorm experience that makes it easier to explore available brainstorming methods, understand their purpose, and select the template that best fits your objective.
