

Catch Issues Early. Keep Production Flowing.

At a water bottling plant, small issues can turn into big losses. Minitab Real-Time SPC gives every member on the floor the ability to detect and correct process variations before they become costly problems.

Operator/Technician

Operators need to keep production running smoothly, but small process variations can quickly escalate into costly errors and downtime.

How Minitab Real-Time SPC Helps:

- Instant alerts when a process drifts out of control
- Prevents small issues from becoming major setbacks
- Reduces waste and rework, improving efficiency

Quality Engineer

Quality Engineers maintain strict quality standards but are often stuck reacting to problems after they've already caused waste and delays.

How Minitab Real-Time SPC Helps:

- Real-time visibility into production data
- Detects process shifts before problems multiply
- Enables deeper analysis with Minitab Statistical Software

Plant Manager

The plant manager oversees production, efficiency, and quality, needing real-time visibility to prevent issues before they impact profits.

How Minitab Real-Time SPC Helps:

- Provides a big-picture view of operations in real time
- Identifies issues by shift, production line, or lot
- Reduces waste, downtime, and production costs
